Uniquely Textured Custom Surfaces

Our Product: Your Vision

Skyline Art Surfaces has developed innovative etched-metal technology to create solid metal surfaces featuring images from our portfolio, custom creations or even content provided by you or your clients.

Completely Customizable

No other etched-metal product on the market can be customized like ours. You choose the imagery, scale it to your specifications, then select finish and color options to meet your unique needs.

Patent-pending Technology

Our patent-pending technology enables you to customize your metal surfaces with unprecedented sophistication. Sculptural etching creates texture, light and shadow: your designs literally come to the surface.

Three-Step Customization

It all starts with your vision. We have a team of expert digital artists and illustrators to help bring your ideas to the surface.

1. Select or combine image types.

Patterns

Photos

Text

Art

2. Determine the scale of your design to suit the application.

3. Select a finish with option to add color.

Step One: Your Image

Patterns

Choose among our many photo conversion options. Our trained staff of digital artists and illustrators can also convert your sketch or idea into a repeatable pattern, or modify an existing image.

Photos

Our photo conversion process translates any photo utilizing one of our many custom conversion options.

Text

Text can be used as signage or as an art form.

Step One: Your Image

Art

The creative mix of content, finishes and colors offers many options for stand-alone artwork customized for your project.

Step Two: Scale

Determine the scale of your design to suit the application.

Step Three: Surface

Your design is translated into a combination of two surfaces: the etched surface and the raised surface. Choose which elements are raised or etched.

Predominately etched surface (below)

Predominately raised surface (below)

Finish

Finish options include:

Sanded to a bright surface

Hand-polished

Color

Solid-color powder coating:

Choose from a palette of colored powder coatings.

Solid-color custom match:

Select a custom color to be printed over your surface, followed by a clear, protective powder coating.

Selective color:

Designate specific elements in your design to be color-printed followed by a clear, protective powder coating.
